Poor	0	0	0	0	0	0	0	0	0	0

Suggestions

1. Update the syllabus pattern what the students need in this current technology
2. A allied paper (numerical aptitude)in 2nd year even semester seems to be somewhat difficult. let it make easier or that paper can be avoided and any other paper related to our technical languages can be added.
3. Add cyber security course
4. I am suggest that we add a new programming language, Rust, to our computer science curriculum. Rust is a modern, systems-level programming language that has gained popularity in recent years due to its focus on safety and performance.

As we know, programming languages are constantly evolving and it is important to keep up with the latest developments in the field. Rust is gaining

traction in industry and is being used by major tech companies such as Mozilla, Dropbox, and Microsoft.

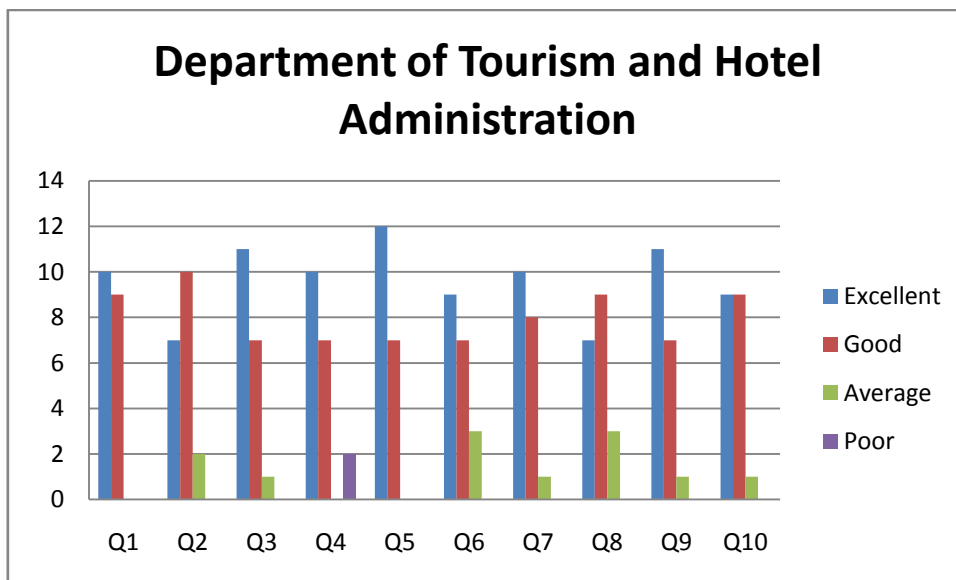

Adding Rust to our curriculum would provide our students with a valuable skillset that will make them highly competitive in the job market. Additionally, learning Rust can help students understand the underlying principles of computer systems, which is an essential component of computer science education.

I recommend that we consider incorporating Rust into our existing programming courses or even offer a specialized course on Rust to cater to the growing demand for this language in the industry. I believe that this addition to our curriculum will not only benefit our students but also enhance the reputation of our college.
